

Public Policy for Education Funding Reform

To: Department of Education
From: The Federal Government
1/29/2020
Subject: Education Funding

Summary:

We believe that schools are not being funded enough and should be helped to improve their students' education because that is the foundation of their life

Recommendations:

So, we advocate for legislation to be passed by Congress that takes 10% of the income from ticket sales from college sports games. All schools will be brought up to the same level of funding.

Limitations and Barriers:

A few down sides are that colleges don't want to give the funds and there is fluctuation in the income of the sports. There is also always the possibility less people go to the games that year, then schools will not get their funding that year.

Alternatives:

We could directly move funds from athletic programs to education, or increase taxes instead of taking funds from college sports instead of using the 10%.

Conclusion:

In conclusion, changes need to be made in school funding to better students' learning.
